ABOUT ME

I'm a passionate Mobile App Developer with 1 years of hands-on experience building cross-platform applications using Flutter and Dart. I specialize in creating smooth, high-performance apps with clean, maintainable code and eye-catching UI. Whether it's building apps from scratch or improving existing ones, I love bringing ideas to life on both Android and iOS.

I'm comfortable working across the full development lifecycle from gathering requirements and prototyping to deployment and post-launch support. I've worked closely with designers, product managers, and backend teams to deliver seamless user experiences that meet real-world needs.

What I bring to the table:

- Strong Flutter/Dart skills for building cross-platform apps
-
- Experience with state management (Provider, Riverpod, Bloc)
- RESTful API integration, Firebase, and third-party SDKs (Stripe, Google Maps, etc.)
- Familiarity with CI/CD tools like GitHub Actions and Fastlane
- Solid understanding of app store guidelines and deployment processes
- Agile team experience, clear communication, and fast iteration
